**COMMAND INFORMATION OFFERS NEW EXECUTIVE LEVEL  
IPv6 STRATEGY BRIEFING**

*Company to Consult Communication Providers on the Planning, Implementing and  
Support of Next Generation Networks*

**Herndon, Virginia – November 10, 2008** – Command Information, the premier provider of next generation network services, today announced that it is offering an executive level briefing aimed to assist Communication Providers in their strategic planning, implementation and support of Internet Protocol version 6 (IPv6). The goal of this briefing is to provide an objective perspective for service providers, cable companies and ISP's on the current state of IPv6 and the implications of IPv4 depletion to their business. This briefing will provide insight into what challenges and opportunities exist with the evolution to the next generation Internet, what options are available for conserving IPv4 addresses and what organizations should be doing today to insure network continuity and business success.

“A competitive advantage can be gained by delivering next generation Internet services, including video on demand, Internet Protocol Television (IPTV) and always-on mobility, but only if deployed securely and cost effectively,” said Doug Dangremond, Vice President, Sales, Command Information. “It is critical that Communication Providers understand the benefits and challenges involved in the IPv6 transition process and that they enable their networks to deliver the services customers expect. The development of this briefing is part of our on-going strategy to assist Communication Providers in delivering next generation Internet services and support of IPv6. Command Information looks forward to our continued work with this important community.”

This new executive briefing will provide Communication Providers an overview of IPv6, address the impact of IPv6 integration, share what industry leaders are already doing, as well as enable organizations to leverage the power of IPv6 to improve operations, roll out advanced networking services and develop a competitive advantage. Specific areas of coverage include:

- Basic IPv6 Overview
- Current State of IPv6 Around the Globe
- Technical and Operational Challenges of IPv6 and Dual Stack (IPv4 & IPv6) Environments
- IPv6 Migration Options and Timing
- IPv6 Address Management
- Business Opportunities and Challenges

“We have worked with many service providers and cable companies, as well as industry experts to ensure we are meeting the informational requirements of the executive level attendees,” said Dangremond. “Incorporating our expertise, the feedback generated from our industry relationships and real-world customer case examples ensure that this briefing provides the strategic guidance executives require to make informed business decisions. We are confident that it will provide beneficial high-level content that will immediately impact the IPv6 strategies of all participating organizations.”

To learn more about this executive level briefing or to schedule a briefing for your company, please send an email to [info@commandinformation.com](mailto:info@commandinformation.com) or call 888.875.0063.

#### **About Command Information**

Herndon, VA-based Command Information is the premier provider of next generation networking services to Communication Providers, Fortune 1000 and government entities. The company provides the services, training, and tools necessary to migrate networks, as well as to enhance and enable edge applications to take advantage of next generation Internet capabilities. Command Information is backed by investment from global private equity firm The Carlyle Group, Paladin Capital, and Novak Biddle.
